

CODE39 Barcode Test

If your barcode scanner can scan the following code, then it can read Code39 barcodes. We recommend scanning this code into a blank document in Word or Notepad.

If your scanner fails to read the barcode below, then it needs to be programmed to allow the reading of Code39 barcodes. This is usually a simple process but requires finding the correct codes to scan from the manufacturer to enable. Please contact your IT vendor, consult the manufacturer's website, or reach out to the support staff at IHLS using <https://help.illinoisheartland.org> or help@illinoisheartland.org to request help.
